

AI Secure Development Lifecycle Standard (AI-SDL)

Version: 2.0

Effective Date: January 1, 2026

Purpose

This standard establishes minimum security, governance, and control requirements for the development, deployment, and monitoring of Generative AI and Agentic AI systems.

Section 1 – Risk Classification

AI-SDL-001

All AI systems shall be classified as Low, Medium, High, or Critical risk prior to production deployment.

AI-SDL-002

Critical-risk AI systems shall obtain approval from the AI Governance Committee before production release.

Section 2 – Security Testing

AI-SDL-003

All Generative AI applications shall undergo prompt injection testing prior to production deployment.

AI-SDL-004

Critical-risk AI systems shall undergo adversarial red-team testing at least quarterly.

AI-SDL-005

Security testing results shall be retained for a minimum of seven years.

Section 3 – Change Management

AI-SDL-006

Any material change to model architecture, foundation model provider, retrieval corpus, or decision logic shall require re-validation prior to production deployment.

AI-SDL-007

Minor prompt modifications that do not materially affect system behavior may be approved through expedited review.

Section 4 – Monitoring

AI-SDL-008

All production AI systems shall maintain immutable audit logs.

AI-SDL-009

Critical-risk AI systems shall be monitored continuously for security events and model performance degradation.

Section 5 – Incident Management

AI-SDL-010

Potential prompt injection incidents shall be escalated to Information Security within one business day.

AI-SDL-011

Confirmed AI security incidents shall be reported to the AI Governance Committee within five business days.
