

AI Secure Development Lifecycle Standard (AI-SDL)

Version: 1.0

Effective Date: January 1, 2024

Status: Superseded

Purpose

This standard establishes minimum security and governance requirements for Artificial Intelligence systems developed, deployed, or maintained within the organization.

Section 1 – Risk Classification

AI-SDL-001

All AI systems shall be classified as Low, Medium, High, or Critical risk prior to production deployment.

AI-SDL-002

Critical-risk AI systems shall obtain approval from the Technology Risk Committee before production release.

Section 2 – Security Testing

AI-SDL-003

Generative AI applications should undergo prompt injection testing before production deployment whenever practical.

AI-SDL-004

Critical-risk AI systems shall undergo adversarial red-team testing at least annually.

AI-SDL-005

Security testing records shall be retained for a minimum of three years.

Section 3 – Change Management

AI-SDL-006

Material changes to model architecture shall require re-validation prior to production deployment.

AI-SDL-007

Prompt updates may be implemented through standard change management procedures.

Section 4 – Monitoring

AI-SDL-008

Production AI systems shall maintain operational logs sufficient to support troubleshooting and incident investigations.

AI-SDL-009

High-risk and Critical-risk AI systems shall undergo performance reviews at least annually.

Section 5 – Incident Management

AI-SDL-010

Potential prompt injection incidents shall be escalated to Information Security within five business days.

AI-SDL-011

Confirmed AI security incidents shall be reported to the Technology Risk Committee within ten business days.
